

Sales Analysis and Reporting Guidelines

1. Weekly Sales Report Requirements

Sales reports must be generated weekly by each store location by Monday 10am to ensure timely analysis of performance trends and inventory planning.

2. Performance Threshold Alerts

Any product category showing sales decline exceeding 15 percent month-over-month must trigger an alert and prompt review by category managers.

3. Sales Channel Reporting

Sales data must be segmented by channel type to accurately assess e-commerce versus physical store performance and corresponding marketing ROI.

4. Exception Reporting

Orders exceeding \$20,000 in value must be reported separately on a daily basis for specialized review on risk and customer service.

5. Data Accuracy Standards

All sales figures must be reconciled against order and payment data before reporting. Discrepancies over 0.5 percent require investigation.

6. Confidentiality of Sales Data

Sales data reports are confidential and should be shared only with authorized personnel to protect competitive advantage and customer privacy.
